```

- When a GET is performed on /StockTicker/stream using curl, a log is displayed. This log contains the total bytes transferred, Average speed, current speed, time spent & etc. When ctrl+c is pressed for a second, this log terminates and the data stream is displayed.

- Wait() method is used to sleep the particular thread. In here stock.wait() is called as the thread on the stock object need to be sleep while the data is gained and printed.
- notifyAll() wakes up all threads that are waiting on stock object after gaining data and printing the values. Those threads are waited by wait() method.
