1. Write a PHP script to establish a connection to the database. Your script should display the appropriate mysql connection error message if it is unable to establish the connection.
2. Modify the script to select the relevant database, create the above table and populate it with data.
3. Modify the script to update the price of Volvo to 35,000.
4. Modify the script to retrieve all data of the table and display it on the web page.
5. Delete the record of Hummer through the PHP script.
